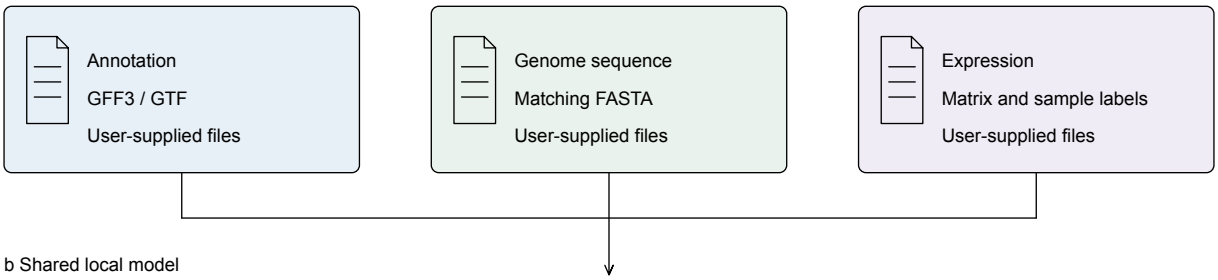
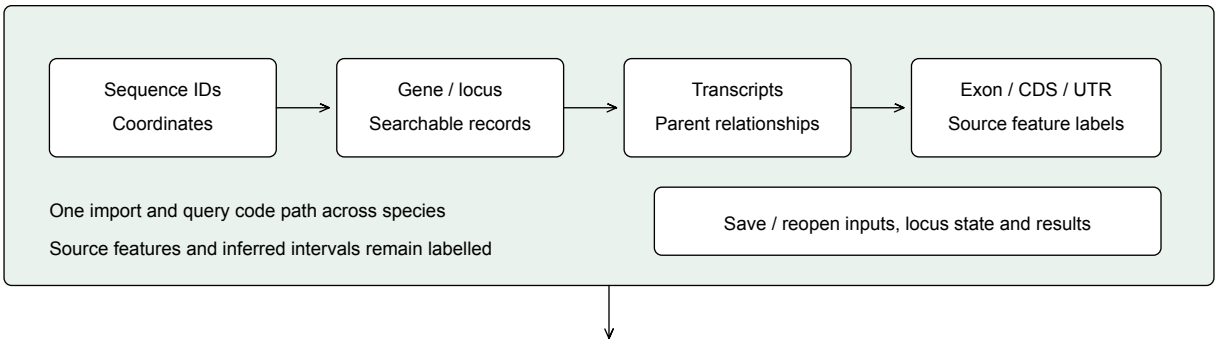
PhytoScope: a portable local framework for plant genome queries

Public data, a shared locus model, and source-derived validation

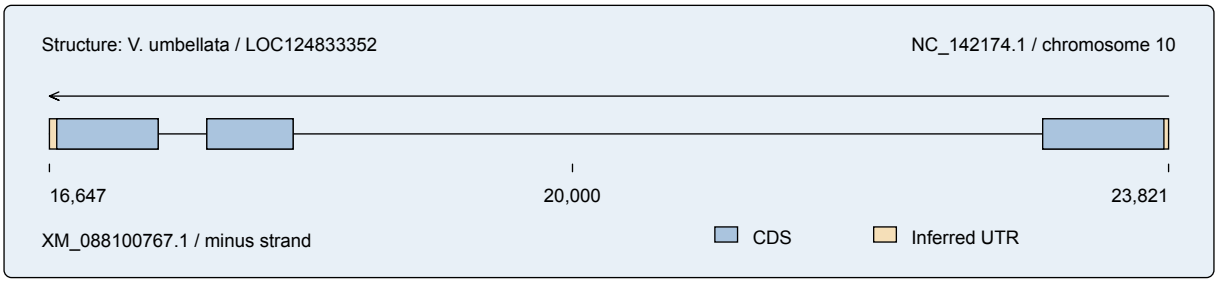
a Compatible public inputs

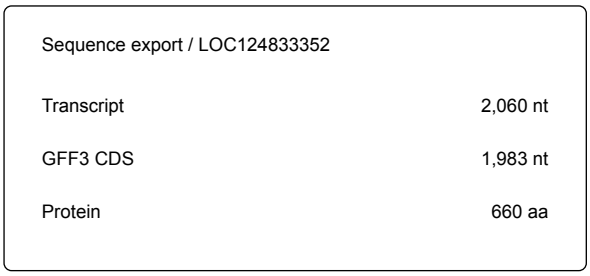


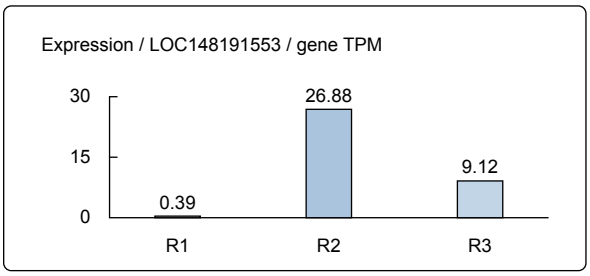
b Shared local model



c Locus-centered queries and outputs

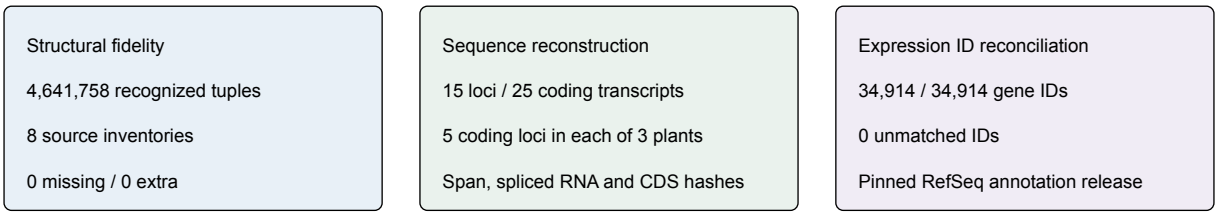






Expression example: three individual IC426787 biological replicates, 5 days post-anthesis.

d Independent public-data validation / seven plant species evaluated



Expression reads: IC426787; reference cultivar: VRB3. This supports import and ID compatibility.

Structure and sequence examples use LOC124833352; expression display uses LOC148191553.
