Selected independent module checks

Promoter sequences

8 / 8 exact

Direct slicing + bedtools; 2,200 bp, both strands

Domain coordinates

16 / 16 matched

Independent Python reconstruction across 13 genes

Similarity classifications

20 / 20 agreed

Small RBCS family panels; not an orthology test

Expression identifiers

34,914 / 34,914

Exact RefSeq gene IDs in the rice-bean matrix

Separate bounded panels; denominators are not comparable accuracy estimates. Protein similarity checks are a one-family smoke test.
